

Reception STEM Week One 2022

PHYSICAL PROCESSES

Amazing foam making activity!

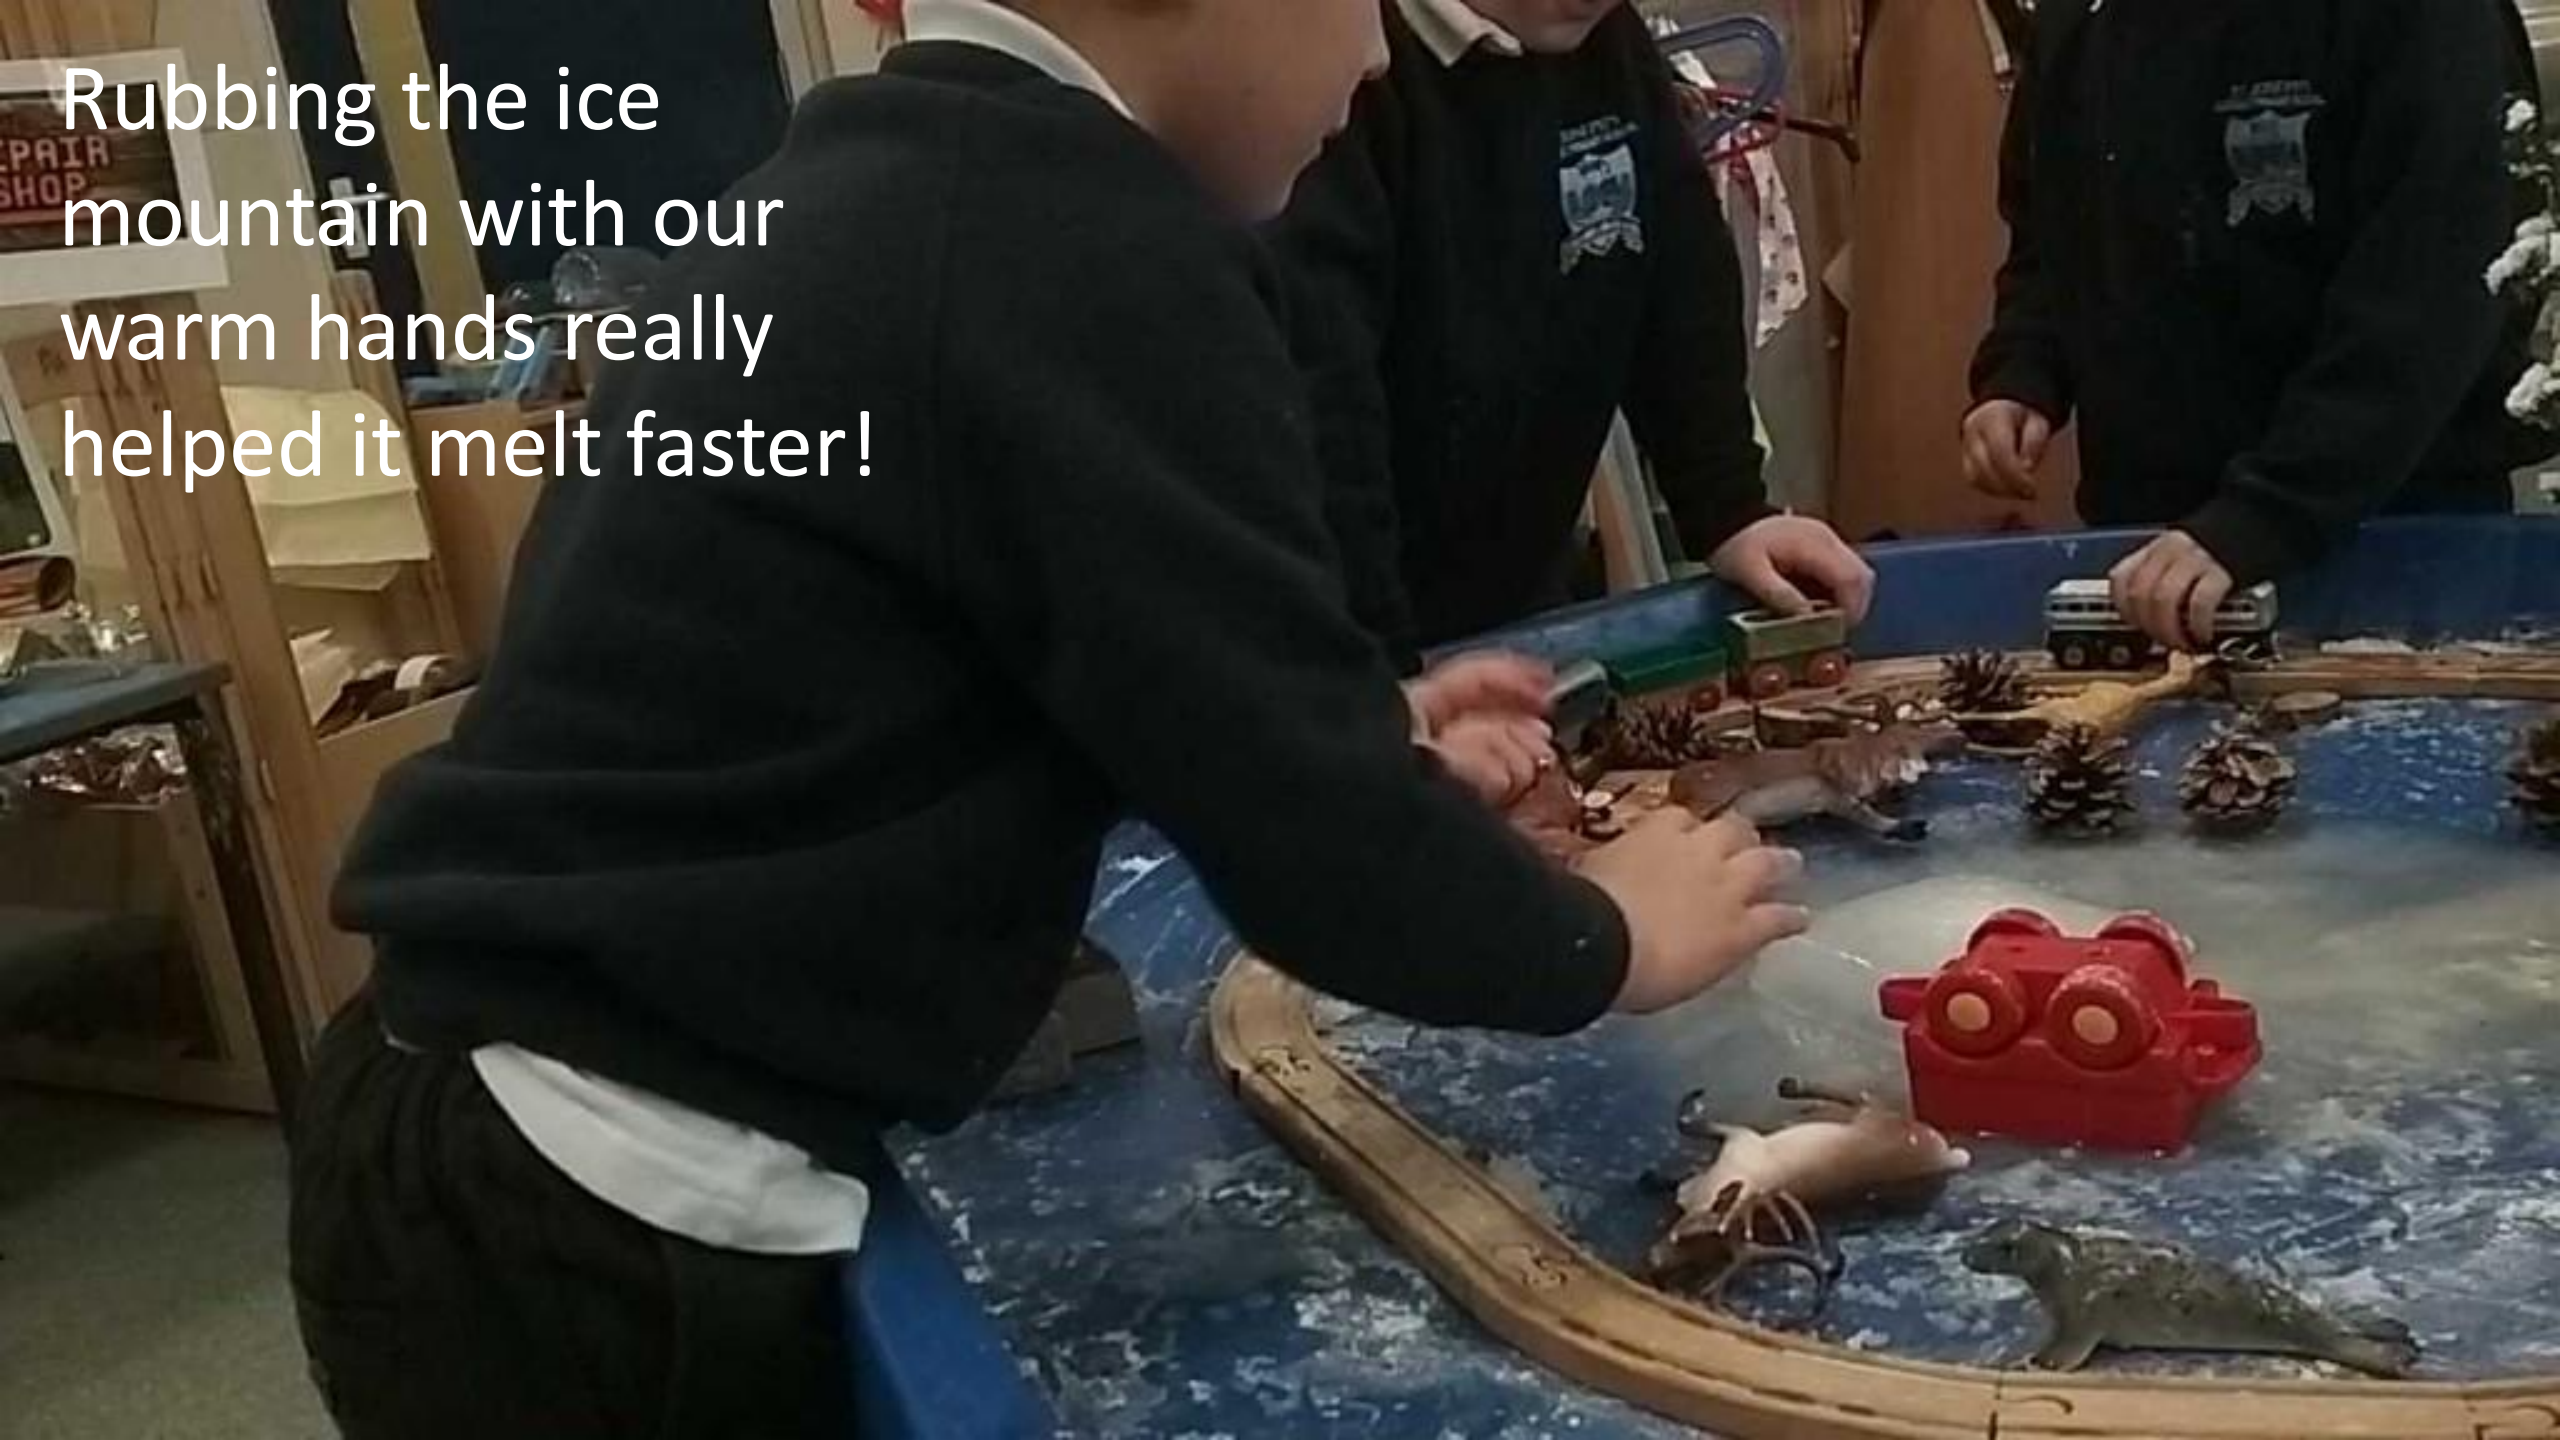

We wanted to make a wintry scene in our tough tray.

We made a Polar Express scene with
a nice mountain. Can we melt the ice
mountain with torches?

Rubbing the ice
mountain with our
warm hands really
helped it melt faster!

Making magic
milk!

Making magic mud with cornflour, food colouring and water!

We made circular
repeating patterns using
coloured sweets, then
added water.

After a while all the coloured coating dissolved and the sweets got all bendy!

We hope you enjoyed our first STEM week as much as we did. Next time – forces and materials!
